

Dev_Environment

Purpose of the Project

The purpose of this project to to create a simple Azure virtual network.

This project is suppose to help practice the skills needed in DevOps environments when it comes to building out infrastructure and knowing how to implement different resources is key.

Sometimes you need to be able to understand how to config subnets so that you do not receive errors due to overlapping. Also being able to allow certain groups access through the configuration of security groups.

The network needed to have the following resources

- ☐ A resource group
- ☐ a virtual network
- ☐ subnets
- ☐ network security groups
- ☐ network security rules
- ☐ subnet network security association
- ☐ public ip
- ☐ Network Interface
